DECLARATION

I _____ Student of
Dr. Subhash College of Computer Science in Bachelor of Computer Application
Sem 5 declares that this Project is not submitted to anywhere else in the
market or in any other form of use.

I also assure that no copy of this project is shared with any other
student and this project is developed by us with guidance of our faculties.

ACKNOWLEDGEMENT

- I take this opportunity to express our sincere gratitude to all those who helped us in various capacities in undertaking this project and devising the report.
- I am privileged to express our sense of gratitude to our respected project guide **Prof.Pooja Pandya** how, was an immense support in completing the project.

- I am also grateful to **Dr. Vimal Parmar**, the Principal and all other faculties of BCA for the brainwave and encouragement given. I take this opportunity also to thank our friends and contemporaries for their cooperation and compliance.
- And lastly, i would like to pay my sincere regards to my parents and to our near and dear ones whose moral support and guidance helped to complete and submit the project well before the due date.

1. PROJECT PROFILE

1.1 DEFINITION

A club management system project that provides and manages various club activities such as member registration, registration for various regular and vacation batches and more. The sports club management system software is a PHP Build system that manages the entire club activities and provides respective functionality for various types of visitors. This system is built with respect to managing a Sports club. It allows normal users to avail for club membership, book the ground at for desired days and even enroll for various activities in the club. The sports club management system is built keeping in mind various daily activities of a club and the software automates all these club functionality for easy operation of the club.

1.2 SYSTEM SPECIFICATION

➤ SOFTWARE SPECIFICATION

- Operating System: Windows 22000.978/64- bit
- Front End : HTML & CSS
- Database : MySQL
- Server: XAMPP
- Design Tool: PHP

➤ HARDEWARE SPECIFICATION

- Processor: x64 compatible processor with 2.60 GHz Clock Speed
- RAM: 512 MB or greater
- Hard Disk: 20 GB or grater

2. TOOLS AND PLATFORM

2.1 FRONT END TOOLS:

<i>Html, Css & Java Script</i>	<i>Coding Language</i>
<i>Visual Studio</i>	<i>Code Editor</i>

2.2 BACK END TOOLS:

<i>PHP</i>	<i>Coding language</i>
<i>Xampp</i>	<i>Server</i>
<i>Mysql Database</i>	<i>Database Connectivity</i>

Xampp:-

- It is a simple light weight APACHE distribution that makes it extern easy for developers to create a local web server for testing and deployment to create a local web server for testing and deployment purpose.
- Since most actual web server use the same commonly as XAMPP it makes transitioning from a local test server externally easy as well.
- XAMPP is also cross platform which means it works equally well on Linux, Mac and Windows.
- XAMPP stand for cross platform(X),Apache(A), marid Database PHP. The term XAMPP is an approved acronym.

PHP:-

- Is an open source server-side scripting language we can create dynamic web pages with the PHP scripting language.
- PHP can also be used to create dynamic web pages that from are generated from information accessed from a MYSQL database. We can embedded PHP commands within a standard HTML page.

- Connectivity to most of the common Database another feature that PHP offers is MYSQL,ODBC and many other although currently only is supported on the central web server.
- PHP is both necessary and prudent to Evaluate the feasibility of the project at the earliest possible time.

MYSQL:-

- The program runs as server providing multi-user access to a number of database.
- MYSQL stand for My Structured Query Language.
- MYSQL is very fast reliable and easy to use. MYSQL is free to download and use.
- MYSQL is a Relational Database Management System(RDBMS).

Java Script:-

- It is used for checking user in before sending to java script is a scripting language most often used for client-side web development.
- Client-side scripting language and server side scripting.

CSS:-

- CSS stand for cascading style-sheet. Added to html 4.0 to solve a problem.
- Multiple style definition will cascade in to one style sheet can save a lot of work.
- Stylesheet define how html elements are to be displayed just like the font tag and the colour attribute in html 3.2 styles are normally saved in external Css file

3.ANALYSIS

3.1 ABOUT EXISTING SYSTEM

The Existing system has used game report and Subscribe field but it's does not a good UI(User Interface) poor security system and less of Menu's or field. In existing system not a proper arrangement of content. In existing system user can face the problem while book or register the ground. user can face the problem because in existing system not available multiple games And the game schedule. Not maintain the game report user interaction. In existing system is used different field in different platforms.

Reports:

There is one facility that User can show result of games as table format

- Team name
- Score
- Points

Name of Organization: Sports Club Management System

Project Time Duration: 15 July, 2022 to 20 September, 2022

Prepared By: Ajay Maru & Atery Zala

BCA 5th SEM, Roll No-04, 11.

EmailAddress maruajay603@gmail.com atreysinhzala2001@gmail.com

3.2LIMITATION OF EXISTING SYSTEM

- In Existing System Less of Data Security
- Less Of Data Integrity
- Not a Proper in Existing System User Interface

3.3 ADVANTAGES OF PROPOSED SYSTEM

- Easy to use GUI that does not require specific training.
- User can Participate Multiple Game's
- Different types of games available
- User can view the latest game result

3.4 FEASIBILITY STUDY :

1. Technical Feasibility Study

A study of resource availability that may affect the ability to achieve an acceptable system. This evaluation determines whether the technology needed for the proposed system is available or not. Can the work for the project be done with current equipment existing software technology & available personnel? Can the system be upgraded if developed? If new technology is needed then what can be developed?

2. Economical Feasibility Study

Economic analysis is the most frequently used method for evaluating the effectiveness of a proposed system. In this feasibility we decide the proposed system as on the basis of cost, benefit analysis. Whether the proposed system is feasible according to the economic factors. The benefit that this system has are many including the working speed of the system queries are sorted in a faster manner, the data are stored in the database that can be used whenever required.

3. Operational Feasibility Study

The assessment made is if the system will be used or not once it is developed. According to the project the material sharing application will use. The operational feasibility if the system is developed and implemented to measure. How well our project solution will work in the organization.

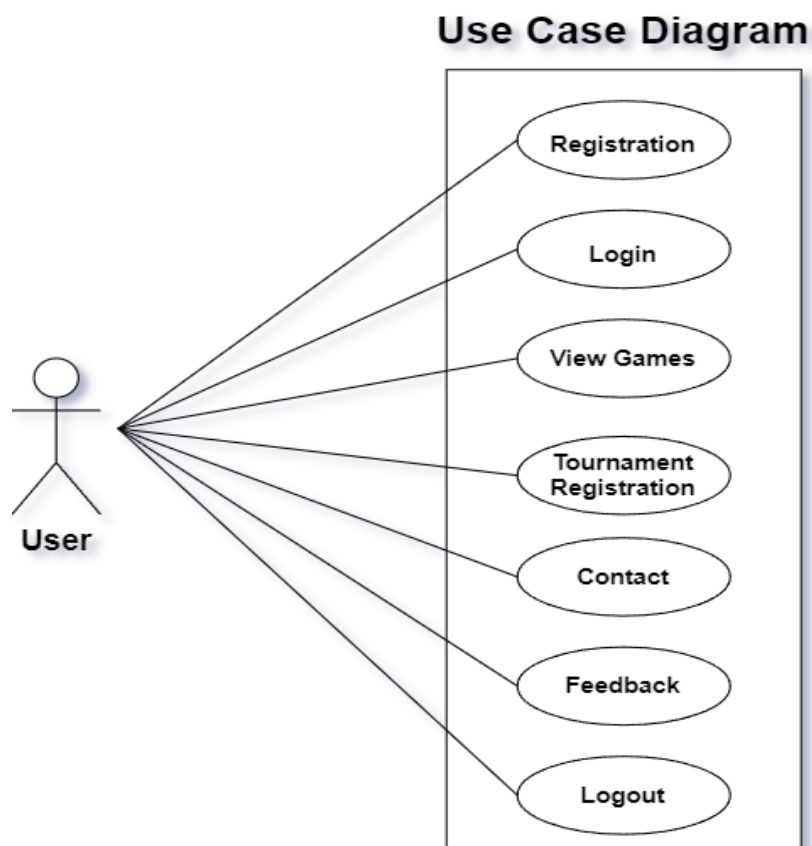

4. Legal Feasibility Study

In Legal Feasibility study project is analyzed in legality point of view. This includes analyzing barriers of legal implementation of project, data protection acts or social media laws, project certificate, license, copyright etc.

5. Schedule Feasibility Study

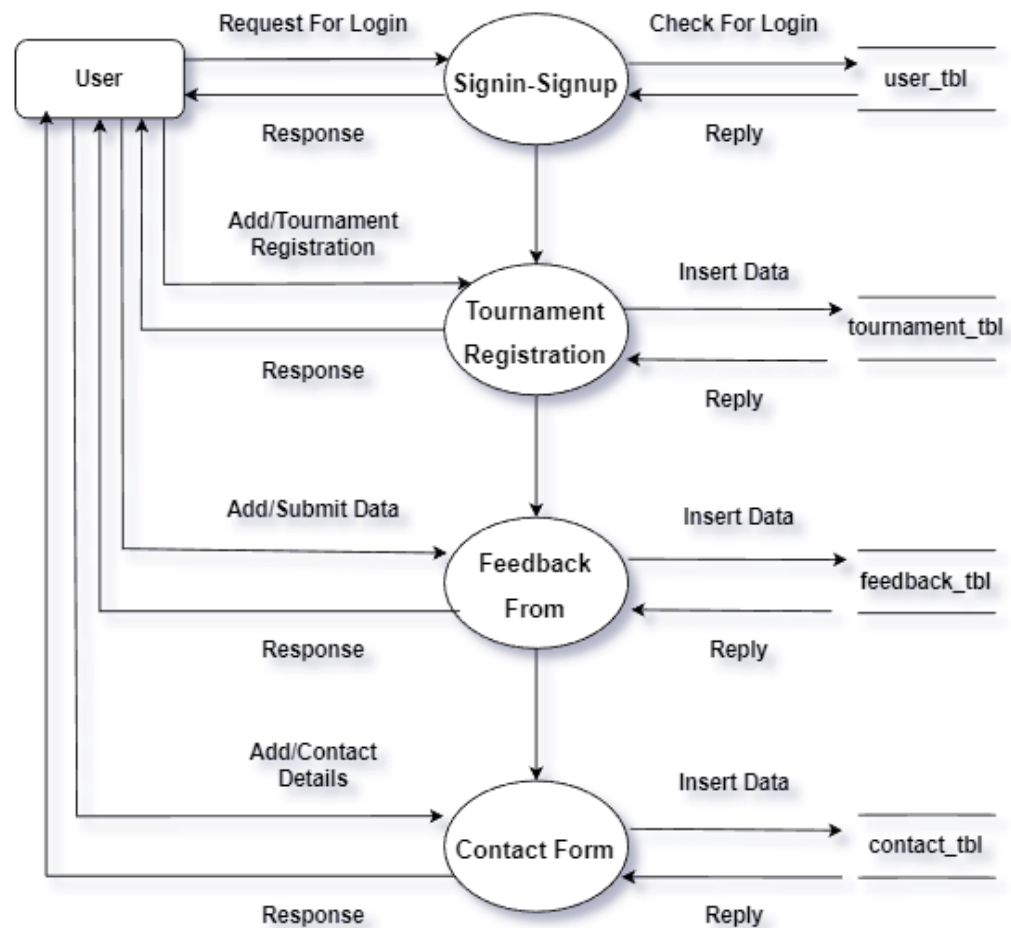

In The Schedule feasibility study can very perfect timeline and deadline to complete the final project the timeline is 1 july to 20 september

5.TESTING AND IMPLIMENTATION

5.1 INPUT SCREEN

- Before actually implementing the new system into operations, a test run of the system is done removing all the bugs, if any. It is an important phase of a successful system. After codifying the whole programs of the system, a test plan should be developed and run on a given set of test data.
- The output of the test run should match the expected results. Sometimes, system testing is considered as a part of implementation process.
 - Program test
 - System test

FIGURE9 SCHEDULE PAGE

CONTACT PAGE:

USER CAN CONTACT OUR CLUB

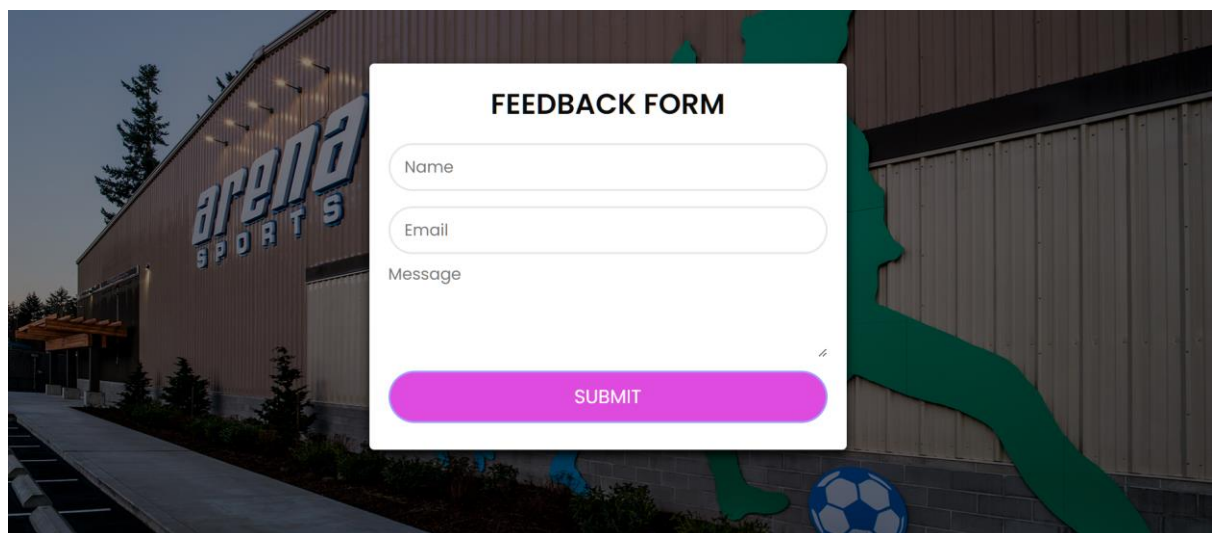

The screenshot shows the 'CONTACT US' page of the Arena Sport website. The page has a dark header with the 'ARENASPORT' logo and navigation links: Home, Activities, Feedback, Contact Us, Logout, and a user profile for 'Ajay'. The main content area is light gray and features a 'CONTACT US' heading. Below the heading, there are two columns of form fields. The left column contains fields for Name, Phone Number, Email, and Message, followed by a blue 'Submit' button. The right column contains contact information: Address (Gandhi road, oop stare plaza, Surat), Phone No (+91 4568794389), Email (arenaclun@gmail.com), and Social media links (Instagram, Facebook, Twitter, LinkedIn).

FIGURE10 CONTACT PAGE

FEEDBACK FORM:

USER CAN WRITE A FEEDBACK ABOUT CLUB AND FACILITIES

The screenshot shows a 'FEEDBACK FORM' overlay on a background image of the Arena Sports building at night. The form is white with a pink 'SUBMIT' button. It contains fields for Name, Email, and Message. The background image shows the 'arena SPORTS' logo on a building with a large green silhouette of a person and a soccer ball.

<div class="columns content">

<div class="content-container">

<h6>Cricket is a team sport played between two teams of eleven players each. It is a bat-and-ball game played on a roughly oval grass field, in the centre of which is a flat strip of ground 20.12 m (22 yards) long, called a pitch. At each end of the pitch is a set of wooden stumps, called a wicket. Note that, rather confusingly, the pitch itself is also often referred to as the wicket. A player from the fielding team (the bowler) propels a hard, fist-sized cork-centred leather ball from one wicket towards the other. The ball usually bounces once before reaching a player from the opposing team (the batsman), who defends the wicket from the ball with a wooden cricket bat. The batsman may then run between the wickets, exchanging ends with another batsman (the "non-striker"), who has been standing in an inactive role near the bowler's wicket, to score runs. The remainder of the bowlers' team stand in various positions around the oval as fielders.</h6>

6.LIMITATIONS AND FUTURE ENHANCEMENT

PLANNED APPROACH TOWARD WORKING:

The maintenance of Sports Club will be well planned and organized. The data will be stored efficiency with optimal disk space consumption in data stores which will help in retrieval of information as well as its storage under resource constraints.

ACCURACY:

The level of accuracy in the proposed system will be higher. All operations would conform to integrity constraints and correctness and it will be ensured that whatever information is received at or sent from the centre is accurate.

FUTURE ENHANCEMEN:

In Sports Club Management System enhance the good user interface and the Admin panel to full control of website by Administrator. In Future add more menus and Fields. And Add Data Show table and perform the Update and Delete field. Main Field add that are Manager Panel to maintain the Club user and data. And create a better GUI(Graphical User Interface).Purchase a Hosting and Domain to make my website live and easy to maintain.
